Version Control (Git) • TypeScript

📂 Personal Projects

Portfolio website ⌝
A portfolio website created using Flutter. This project was made to mainly explore potential of Flutter web.

RideShare ⌝
A carpooling app, developed in Flutter with backend programmed in Nodejs and postgres database. The app allows users to share their car seats with other users and allow users to search for a ride and book published rides. This helps to share fuel costs and reduce traffic and fuel consumption.

Coppodeal ⌝
A flutter app that is used to review and rate products on the app. A seperate admin app is used to manage the app. Users can request to be registered as comapnies and when approved, can add products, reply to reviews, etc. Firebase is used as the database.

Attendance Management System ⌝
A Flutter app that allows course instructors to manage and monitor the attendance of students. Students can mark their attendance using a random code generated by the app.

Movies app ⌝
A Flutter mobile app that is connected to a REST API to fetch data and view all latest and highest rated movies. Also allows to search and save movie to save list.
